

Premium quality with single-use economy

# Q-Seal™ for lead & copper water sampling

QEC's Q-Seal™ leak-proof oblongs are your best choice for collecting water samples to be tested for lead, copper, and other metals: a reliably leak-proof precision-engineered container at an affordable price.

For water sampling projects with a high number of sample points, such as schools and institutions, Q-Seal™ gives you single-use economy along with the features you expect from a premium container:

**Made of chemically-resistant HDPE** with easy-to-read graduation marks in milliliters and ounces.

**Precision-engineered 720-degree** thread engagement and inner sealing ring for leak-proof security.

**Heavy gram weight closures** that won't crack or break. Mated with the neck finish for a smooth action that seals right the first time and every time.

**Popular oblong shape** to maximize cooler space and for sure-grip handling.

Available in 250mL, 500mL, and 1000mL sizes, Q-Seal™ containers come pre-assembled and can be Custom-Preserved™ to your unique laboratory specifications.

For more information please contact your QEC representative or our **customer service team**.
